

# STEALTH<sup>®</sup>

**QUIET. POWERFUL. PROVEN.**

THE WORLD'S ONLY  
ULTRA-HIGH-EFFICIENCY TOILETS

0.8 gpf Single Flush  
NEW 0.5/0.95 gpf Dual Flush

 **NIAGARA**  
CONSERVATION<sup>®</sup>

## A 0.8 Gallon Flush, Now Proven in Over 500,000 Installations!

In 2009, Niagara Conservation put toilet technology on a higher plane. Flushing on just 0.8 gallons, Stealth<sup>®</sup> was the first, and is still the only true UHET<sup>®</sup> (Ultra-High-Efficiency-Toilet).

**Since then, over half a million Stealth toilets have been installed globally, delivering quiet, powerful and virtually trouble-free performance for our customers!**

Flawless performance in real-world residential and commercial applications proves that Stealth technology works! With water consumption that cuts the industry standard in half, Stealth quietly gets the job done with one flush, leaving a clean bowl every time from the large water surface. Plus, all the working parts in a Stealth toilet are covered by a 10-year warranty.

And, the tank, bowl and other ceramic components of the Stealth toilet are **Made in the U.S.A.**

**Save One Billion Gallons in One Year!**

When a 0.8 gpf Stealth Toilet is installed along with water-saving faucet aerators and showerheads, the resulting Stealth System will **save up to 40,000 gallons of water per year, per household.**

**That means, if 25,000 homes are retrofitted with the Stealth System, the annual savings will be one billion gallons of water!**

Stealth® toilets work because of the patented American Siphonic Flush System, with vacuum-assist technology. Stealth is also equipped with another proven performer, the Fluidmaster 400A Fill Valve.

Every Stealth toilet is EPA WaterSense labeled, which can help homes and commercial buildings achieve LEED Gold or Platinum certification.

# STEALTH<sup>®</sup> AMERICAN SIPHONIC FLUSH SYSTEM

Stealth toilets utilize patented vacuum-assisted technology, with a second separate water chamber inside the tank.

## Before the flush...

**1** Water begins to refill the inner chamber and the tank surrounding it.

**2** As water fills the inner chamber, it pushes air into an air transfer tube.

**3** Air leaves the transfer tube and pressurizes the trapway.

**4** Air pressure exerted on the “bowl side” of the trapway creates a larger water surface.

## Dual Flush Technology

The Stealth Dual Flush has primary and secondary inner chambers. When the “full flush” button is pressed, both the primary and secondary chambers release a total of 0.95 gallons of water, to handle solid waste.

# Innovative Technology That Works

Stealth combines a siphon jet with rim jet technology and harnesses the power of air pressure to achieve an unmatched level of water-saving excellence.

## During the flush...

**1** When the flush button is pressed, water leaving the tank forces water through the openings in the side and front of the bowl rim.

**4** As water leaves the inner chamber, it pulls air from the trapway into the transfer tube.

**5** Air leaving the trapway creates a vacuum, exerting a pull that accelerates the force of water flowing through the trapway.

This “vacuum-assist” helps the all-important siphon effect begin sooner and last longer to complete the flush more efficiently.

**2** Water flows down through the bowl, thoroughly rinsing the surface.

**3** Water leaves the tank and enters the trapway under pressure.

When the “HALF” button is pressed, only the primary chamber is used, releasing 0.5 gallons of water, to handle liquid waste.

Primary Chamber

Secondary Chamber

## Stealth At-A-Glance

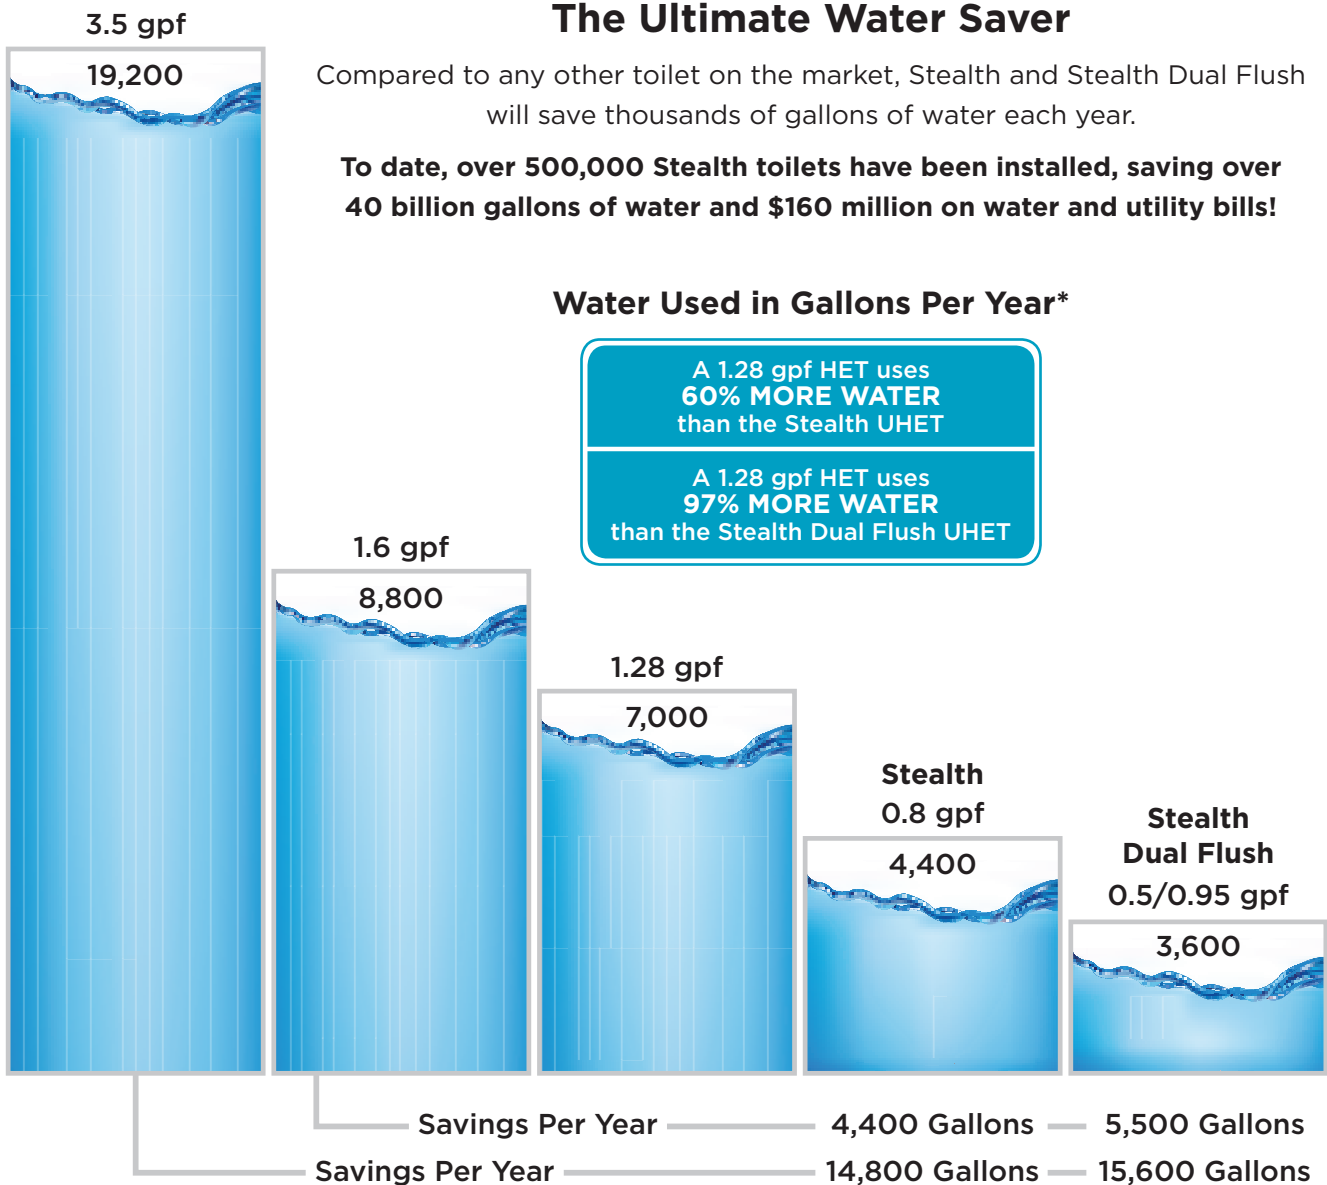

- 0.8 gpf models, bottom outlet or rear outlet
- Dual Flush uses .95 for solids, 0.5 gpf for liquids
- All models are EPA WaterSense labeled
- Patented vacuum-assist flush technology
- Equipped with Fluidmaster 400A Fill Valve
- Large water surface
- Fully-glazed trapway and low-friction ceramic surface
- 10-year limited warranty on all working parts
- Lifetime limited warranty on ceramics

### The Ultimate Water Saver

Compared to any other toilet on the market, Stealth and Stealth Dual Flush will save thousands of gallons of water each year.

**To date, over 500,000 Stealth toilets have been installed, saving over 40 billion gallons of water and \$160 million on water and utility bills!**

#### Water Used in Gallons Per Year\*

\*Water used in Gallons Per Year figures are based on a 3-person household and 5 flushes per person per day, and assumes the Dual Flush half flush button will be flushed twice as often as the full flush button.

# The Stealth UHET Line

## Stealth UHET 0.8 gpf

A quiet flush with maximum power, superior to other HET's.

## Stealth Dual Flush UHET 0.5/0.95 gpf

Two flush options: 0.95 gpf for solids, 0.5 gpf for liquids.

## Stealth Rear Outlet UHET 0.95 gpf/3.6 lpf

The ideal solution for in-wall plumbing.
