

Introduction

Thank you for your recent purchase of the most advanced air filtration and energy recovery ventilation available today. Your RecoupAerator is designed to bring fresh filtered air indoors to your home or business while simultaneously exhausting stale air.

The 200DX is an Energy Recovery Ventilator (ERV), meaning the RecoupAerator captures temperature and moisture from the stale, outgoing air and transfers it to the incoming Fresh Air. No matter what the season, you will be comfortable breathing fresh clean air.

In addition to having an energy transfer rating of 96%, the RecoupAerator moderates indoor humidity in the winter and turns away outdoor humidity in the summer.

- Automatically self-balances air flow
- 96%+ heat recovery efficiency
- 95% filtration at 1.8 microns (MERV 12)
- Up to 75% moisture transfer capability (depending on season)
- UL listed and certified
- ECM motors with Permanently lubricated Ball Bearing
- Optional Pressure Transmitter (senses and adjusts for changes in indoor air pressure)
- Optional CO₂Guard™ (senses and adjusts for elevations in CO₂)
- EconoCool™ (brings in cool, filtered night air in summer)
- Compatible with many IAQ monitors and fans
- Automatic frost prevention down to 10° F
- Variable blower speed
- Quiet operation
- Low/easy maintenance
- Exceeds ASHRAE 62.2 ventilation recommendations
- No drain required
- Filter service indicator
- Fully insulated
- 5-year Warranty
