

LED Bulbs and Fixtures

The beauty of LED bulbs besides their low wattage and long life is that they fit traditional fixtures. They come in an amazing array of types and colors. Researching LED bulbs I wanted bulbs with good color rendering. Bulbs should be CRI rated over 80.

The very best CRI bulb, the GE Reveal, also uses the most electricity and the point of LED is to save watts. The Feit G25 bulbs were the best choice of the bunch at the time. The CRI is 94 and color temperature is 2700k. The neck of these G25's were too short to fit the track lights though so I bought slightly less efficient Feit R20 bulbs with a CRI of 93. I was less concerned with color for closets, utility and garage LED fixtures so purchased for lumens per watt.
